

Compile with 3 terminal commands:

To ensure the terminal has authorization to install the script:

```
set-executionPolicy -scope process -executionpolicy bypass
```

Install webpack:

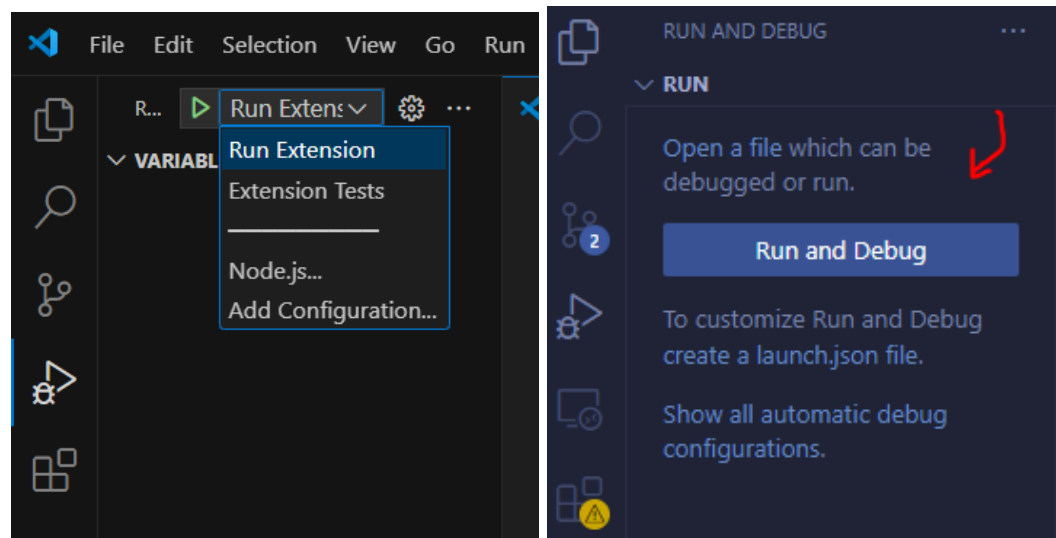

```
npm install --save-dev webpack webpack-cli
```

Compile

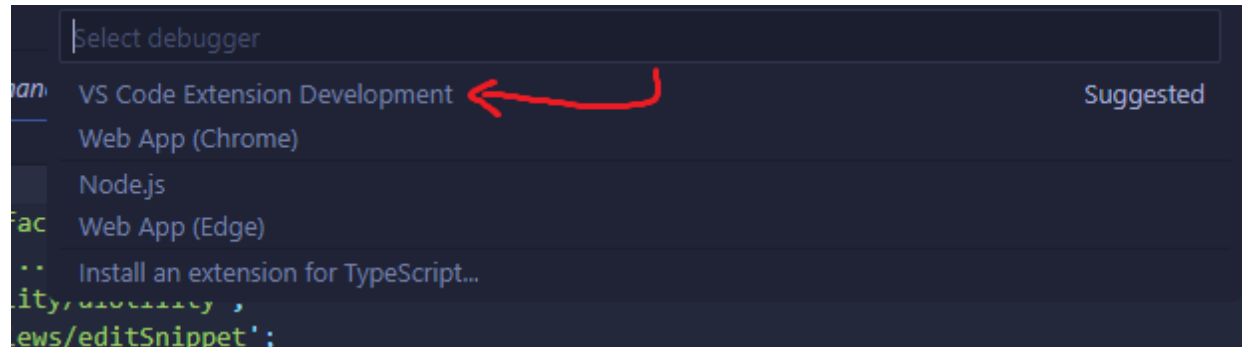

```
npm run compile
```

Opening a debug window:

1. use Run and Debug on the left side to enter the debug window

- a.
2. select "VS Code Extension Development"

- a.
3. Now, a VS Code window will open with the extension active for the purpose of debugging

Export VSIX file with 2 terminal commands:

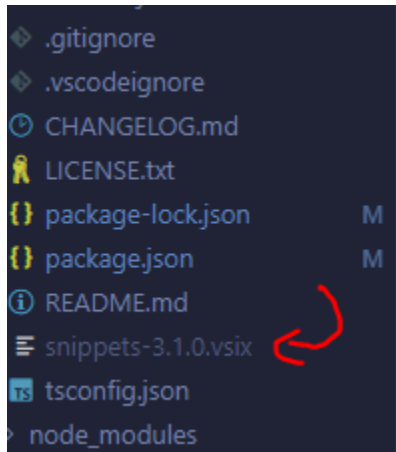

Install VSCE

```
npm install -g vsce
```

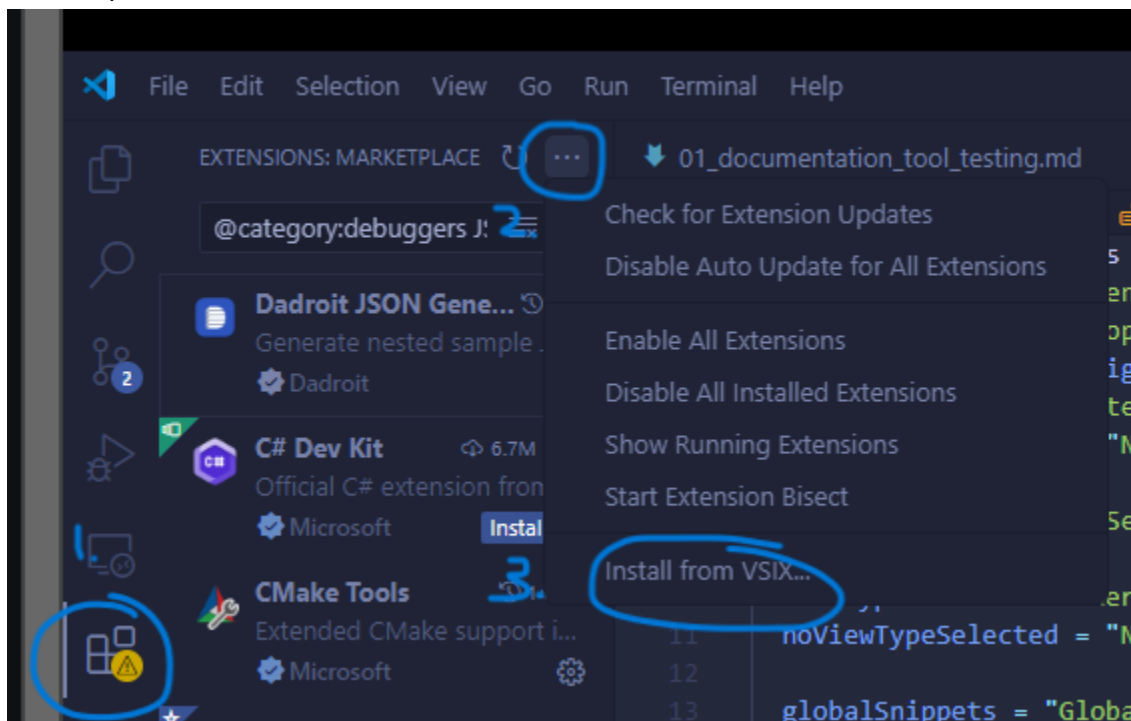

Package the extension using VSCE

```
vsce package
```

This will output a VSIX file in the project folder:

Then import VSIX file in the extension's interface

- then select your VSIX file
- the extension should be installed
